## Announcing the Hurricane antenna kit for GeoExplorer series handhelds

Trimble is pleased to announce the availability of the Hurricane antenna kit for use with GeoExplorer® series handhelds. The kit consists of the Hurricane antenna, a three-meter cable for connection to GeoExplorer series handhelds, and an antenna pouch.

The Hurricane antenna is a high quality external antenna which is particularly resistant to signal interference. It is ideal for customers who need to collect the best possible data, and is especially suitable for those working in difficult environments such as under canopy or in urban canyons.

### Features and benefits

The Hurricane antenna has the following key features:

- A large, integrated groundplane to block multipath signals.
- An integrated screw thread for ease of mounting on a backpack, range pole or magnetic mount. Raising the antenna above the body minimizes interference and the blocking of signals, resulting in a higher yield of positions and the best possible performance.
- Advanced design to maximize the benefit of the EVEREST™ multipath rejection technology in the GeoXT™ receiver.

### Ordering information

The Hurricane antenna kit is available for immediate order and shipment using the following part number:

Product	Part number
Hurricane antenna kit	52446-00

### For more information

Please contact your local Trimble sales representative.

A white paper detailing a study of antenna performance with the GeoXT is available on [www.trimble.com/mgis\\_hurricane.html](http://www.trimble.com/mgis_hurricane.html)
